

Hoses

HKS offers a wide range of hoses made of a variety of materials and connecting parts. HKS hoses can be used in a variety of areas, e.g. for bottling, filling or conveying various media (e.g. compressed air, steam, water, aggressive media, etc.) or as vibration dampers for cooling and air conditioning systems. HKS also develops special solutions and offers hoses with special connectors.

Areas of application for hoses

- › Connection between stationary and moving units
- › Absorption of lifting movements
- › Absorption of heat expansions
- › Compensation of parallel pipe offset

Hose types

- › Stainless steel hoses (1.4541/1.4404 with braid made of 1.4301/1.4404)
- › Fuel hoses made of corrugated Teflon® with braid and fire protection hose
- › Hydraulic hoses
- › Elastomer hoses (NBR, CR, EPDM)
- › PTFE hoses

Connection parts

- › Flanges
- › Welding ends
- › Screwed pipe connections
- › Threaded nipples
- › Pipe nuts
- › Couplings
- › Special connectors on request

Nominal diameters: DN 6 bis DN 300
Operating temperature: up to 600 °C
Pressure stage: PN 1 to PN 250

Corrugated metal hoses

Design and function

Stainless steel hoses are made from thin-walled stainless steel pipes with length-wise welds. Special tools are used to mould hydraulics convolutions into the pipes which achieves the desired moveability and pressure resistance of the hoses. Steel hoses are used for conveying liquids and gases as flexible connecting elements in pressure and vacuum lines, absorbing movement, vibrations and heat expansions.

Metal hoses have single-layer walls and can be equipped with single or double braid to increase pressure resistance: The braid prevents the hose from expanding, absorbs tensile forces and also serves as a protective hose.

Braid and hose can be made from different **materials**. Depending on the application and the media, the hose can be made of the materials 1.4541 or 1.4404 and the braid made of material 1.4301 or 1.4404 and, depending on the pressure load, can be used at an operating temperature from -270 °C to max. 600 °C (see table for de-rating factors). The materials have a very high resistance to water, steam and thermo oil. A detailed resistance table can be found in the general technical appendix.

As a standard, the hoses are available in **Nominal diameters** from 6 mm to 300 mm, where the Nominal diameter of a hose is the same as the internal diameter. The permitted operating pressure is be-

tween 0.25 bar and 250 bar depending on operating temperature and Nominal diameter.

The **length** can be freely selected by the customer. The hose ends can be welded with all standardised connections. Custom connections are also available.

Application options for interlocked metal hoses

HKS hoses are used in the following areas, among others: Cooling and air conditioning systems, exhaust plants, vacuum and high pressure technology,

heat exchanger devices, food and drink industry, heat exchanger installations, landfill operations, chemistry plants, pharma industry, cleaning technology,

vehicle technology, medical technology, solar engineering, air/space travel, research and development.

Stainless steel hose in a combined heat and power plant with 90° bend and swivel flanges

Stainless steel hose in a combined heat and power plant with 90° bend with swivel flanges on one side and welding ends at the other side.

Stainless steel hose in a combined heat and power plant with swivel flanges

Stainless steel hose for starter air for installation in ship motors

Stainless steel hose with DILO connection for installation in ships motors.

Test certifications and documentation

As a rule, all hoses are subjected to a pressure and leakage test before shipping. Hoses which are not subject to the Pressure Equipment Directive are

tested with a test pressure $PT = 1.5 \times PN$. On request, test certificates to EN 10204:2005 – 01 can be issued.

Interlocked metal hoses

Derating factors: to determine the permitted operating pressure at increased operating temperatures

Temperatures in °C	Temperature derating factor C_t			
	1.4301	1.4541	1.4571	1.4404

- Nominal diameter (inner diameter)

Nominal pressure stage acc. to EN 1333

Permitted operating pressure at 20 °C (SF4 with 4-fold bursting pressure resistance)

Permitted test pressure at 20 °C

Minimum bending radius for cyclic loading (If the installation instructions according to ISO 10380 are observed, an average service life of 5·10⁴ load exchanges, but at least 4·10⁴ load exchanges can be expected. Higher operating temperatures and corrosion influences decrease the service life and/or increase the minimum bending radius.)

Minimum bending radius for static load (e.g. compensating pipe offset)

External diameter of the hose

Hose weight per meter with/without braid (deviation +/- 10 %)

Design: The table values shown refer to 20 °C design temperature with a standard Material combination 1.4541/1.4301 (hose/braid material). For other materials and operating temperatures, operating pressure and movement absorption have to be adapted with factors or requested separately.

Example type C:**SE 0050 / 016 / B / DAGA - 500**

			┌───┐	
Type	DN	PN	Connections	Length

Hose connection types:

B	Swivel flange	S	Custom-made flange	DAGA	Rotating external thread
F	Fixed flange	K	Customer part	DIGA	Rotating internal thread
V	Welding neck flange	AGA	Fixed external thread	ÜFD	Pipe nut, flat seal
R	Weld end	IGA	Fixed internal thread	ÜKD	Pipe nut, conical seal

DN	Nominal diameter (inner diameter)
PN	Nominal pressure stage acc. to EN 1333
PS	Permitted operating pressure at 20 °C (SF4 with 4-fold bursting pressure resistance)
PT	Permitted test pressure at 20 °C
R_{min,dyn}	Minimum bending radius for cyclic loading (If the installation instructions according to ISO 10380 are observed, an average service life of 5·10 ⁴ load exchanges, but at least 4·10 ⁴ load exchanges can be expected. Higher operating temperatures and corrosion influences decrease the service life and/or increase the minimum bending radius.)
R_{min,stat}	Minimum bending radius for static load (e.g. compensating pipe offset)
D_a	External diameter of the hose
G	Hose weight per meter with/without braid (deviation +/- 10 %)

Design: The table values shown refer to 20 °C design temperature with a standard Material combination 1.4541/1.4301 (hose/braid material).
For other materials and operating temperatures, operating pressure and movement absorption have to be adapted with factors or requested separately.

Hose connection types: Hose and thread nipples

Welding end **R**

Threaded nipple with hexagon DIN 2990 **AGA**

Threaded nipple with hexagon DIN 2950-280 (N8) **AGA**

Hose connection types: Screw fittings

Welding pipe joint from supplier **DILO**

Pipe joint conical sealing **DIGA**

Pipe joint with flat seal **DAGA**

Pipe joint with conical seal **DAGA**

Hose connection types: Flanges

Swivel flange PN 40 with flange **B**

Swivel flange PN 10 with collar or flange **B**

Welding neck flange PN 16 **V**

Hose connection types: Flanges

Hose connection with rectangular flange **S**
